

**PRODUCT SPECIFIC LICENSE TERMS**  
**iAnywhere SQL Anywhere Studio 8.0**  
**(“Program”)**

IN ADDITION TO THE LICENSE TERMS SET OUT IN THE SYBASE LICENSE AGREEMENT, THE FOLLOWING ADDITIONAL OR DIFFERENT RIGHTS AND ACCOMPANYING OBLIGATIONS AND RESTRICTIONS SHALL APPLY TO THE PROGRAM:

**Sybase SQL Anywhere Studio Components.** This version of SQL Anywhere Studio includes the following components:

- Adaptive Server™ Anywhere DBMS (Client and Server version)
- Adaptive Server Anywhere Personal Database with Synchronization
- PowerDynamo™ (included in v7 only)
- Adaptive Server™ Anywhere DBMS UltraLite edition
- Sybase MobiLink Synchronization Server
- Sybase Central™
- Physical Architect™
- InfoMaker®
- jConnect™

Note: The listed products may not all be available on all operating systems; for example, Ultralite is not available on UNIX. Please check product documentation for complete product availability.

Although the Program may include or be provided with versions of SQL Anywhere Studio server and client components for several different operating systems, you may install only one such version for each licensed copy of SQL Anywhere Studio. Each such copy of the Adaptive Server Anywhere DBMS may be installed on a single Machine running one (1) operating system. Installation and use of the other components is as described below:

**SQL Anywhere Studio (single User edition).** The license for one (1) client Seat permits you to access the Adaptive Server Anywhere server components from one (1) Seat and you may install the following components on this single connected client Seat: the Adaptive Server Anywhere client software, jConnect, and the Adaptive Server Anywhere Personal edition with Synchronization and, for version 7 only, PowerDynamo. Synchronization for the Seat described above may be implemented by using one, but only one, of the components Sybase MobiLink or Sybase SQL Remote. You may also install and use one (1) copy of the MobiLink Synchronization Server for purposes of synchronization with SQL Anywhere databases. You may use one (1) copy of the UltraLite database and the MobiLink client software on one client device. You may use one (1) copy of each of Sybase Central, Physical Architect and InfoMaker on one machine solely in conjunction with your use of Adaptive Server Anywhere. You must use the foregoing programs on either the server Machine on which the Adaptive Server Anywhere server components are installed or on the client Seats licensed to access the Adaptive Server Anywhere server.

**SQL Anywhere Studio For Workgroups.** The license for ten (10) client Seats permits you to access the Adaptive Server Anywhere server components from ten (10) client Seats and you may install the Adaptive Server Anywhere client software, jConnect, and the Sybase Adaptive Server Anywhere Personal Database with Synchronization and, for version 7 only, PowerDynamo, on each of those ten (10) Seats running one operating system. You may add additional Seats or Users to a Workgroup by purchasing additional Seat or User licenses, but such Seats or Users may only be purchased on an individual basis. Seats or Users from other purchased Workgroups may not be combined with an existing Workgroup to add additional Seats or Users in excess of the original Workgroup. Synchronization for each of the ten Seats described above may be implemented by using one, but only one, of the

components Sybase MobiLink or Sybase SQL Remote. You may also install and use one (1) copy of the MobiLink Synchronization Server for purposes of synchronization with SQL Anywhere databases. You may use one (1) copy of the UltraLite database and the MobiLink client software on ten client devices. You may use one (1) copy of each of Sybase Central, Physical Architect and InfoMaker on one machine solely in conjunction with your use of Adaptive Server Anywhere. You must use the foregoing programs on either the machine on which the Adaptive Server Anywhere server is installed or on one (and only one) of the ten client Seats licensed to access the Adaptive Server Anywhere server.

**Concurrent User.** As an alternative to the foregoing, the license for client Seat(s) accessing a single Adaptive Server Anywhere server component as described above may instead be used by You at your option as Concurrent User license(s). Such Use is limited to access to a single server, and the Concurrent User may not access multiple servers as in a multi-server networked configuration.

**Java Option.** The Java in the database option of Adaptive Server Anywhere may not be installed or used without obtaining a separate license at an additional charge if applicable.

**UltraLite Deployment.** You may deploy an unlimited number of applications incorporating the UltraLite Deployment option of Adaptive Server Anywhere Personal Database provided each such application or copy thereof is for Use by a single User and provided neither the application nor any data is synchronized to or from an application, database management system or similar product running on a separate device. For synchronization of such applications to an application, database management system or similar product on a separate device, Customer is required to purchase a license for synchronization.

**MobiLink Synchronization Server.** You may reproduce and use copies of the MobiLink Synchronization Server to synchronize between either (1) Adaptive Server Anywhere or (2) UltraLite databases and other applications or database management systems provided you have purchased Synchronization licenses for all Adaptive Server Anywhere or UltraLite databases being synchronized.

**InfoMaker Deployment Kit.** You may reproduce and distribute the InfoMaker Deployment Kit Distributable Components (as specified in and subject to the limitations stated in the Documentation) provided you (a) only distribute such Distributable Components in conjunction with and as part of an application built using InfoMaker; (b) include a valid copyright notice on your application; and (c) you indemnify and hold harmless Sybase and its affiliates and suppliers from any claims relating to or arising from use or distribution of such Distributable Components as provided in the License Agreement.

**Adaptive Server Anywhere Replication Agent™ and SQL Remote for Adaptive Server Enterprise.** Although the Program may include or be provided with versions of Sybase Adaptive Server Anywhere Replication Agent and SQL Remote for Adaptive Server Enterprise, such versions of Sybase Adaptive Server Anywhere Replication Agent and SQL Remote for Adaptive Server Enterprise may not be installed or used without the purchase of a separate license at an additional charge.

**SQL Anywhere Studio UNIX. Operation of User Tools.** For each copy of SQL Anywhere Studio licensed for a UNIX operating environment, you are licensed without further charge to run the following user tools on one Intel (or compatible) Machine running Windows 95, Windows 98, or Windows NT: Sybase Central, PowerDynamo, Infomaker, and Physical Architect. You may only run the Adaptive Server Anywhere database server on the UNIX Machine and you are not authorized to run the database server on this Intel Machine. In the event SQL Anywhere Studio for UNIX includes or is provided with a UNIX version of PowerDynamo, you may use either the UNIX version or a Windows version (but not both). Notwithstanding the foregoing, PowerDynamo may only be used for development and testing purposes.

**Security Option.** Although the Program may include or be provided with software enabling 128 bit Certicom Encryption for Adaptive Server Anywhere and the 56 bit Casio MDSR Encryption for Adaptive Server Anywhere, such 128 bit Certicom Encryption for Adaptive Server Anywhere and 56 bit Casio MDSR Encryption for Adaptive Server Anywhere may not be installed or used without the purchase of a separate license at an additional charge. The Certicom Encryption and Casio MDSR Encryption may not be used except in conjunction with Sybase SQL Anywhere Studio. You are advised that these Encryption Programs and related Documentation are cryptographic in

nature and therefore are highly regulated. Obtaining any necessary export or import approval for any of your applications or the Certicom or Casio Encryption Programs or Documentation is your responsibility.

**Election to Use Prior Version of SQL Anywhere Studio Components.** Customers who have previously purchased an earlier version of SQL Anywhere Studio may elect to install and use a prior version of any of the components licensed by you with SQL Anywhere Studio 8 instead of using the version included with SQL Anywhere Studio 8. Users or Seats licensed for SQL Anywhere Studio 8 may likewise access an earlier version of the same components licensed for Use with SQL Anywhere 8 instead of using SQL Anywhere Studio 8. This election is granted on condition that you remove such earlier version and install the SQL Anywhere Studio 8 version within a reasonable time. Your use of such earlier version shall be governed by this license, and your rights to use such earlier version shall terminate when you install and/or Use the SQL Anywhere Studio 8 version.

This election is subject to the following conditions:

1. Use of the earlier versions is a substitute for use of the version 8 components and does not authorize the Use of additional components, Seats or Users;
2. Copies of any software necessary to use the earlier version must be made by the Customer from previously licensed software. Sybase has no obligation to provide copies of earlier versions of the software for the purpose of this election.
3. Support for prior versions is subject to the commercial availability of support for a particular version from Sybase. Support for some prior versions may unavailable.
